Hiring Manager

Re: IT Support Opportunities

Dear Hiring Manager:

I am seeking an IT support opportunity where I can help people solve technical problems and use their systems confidently. I bring experience supporting Windows and communications networks, guiding users through software transitions, writing practical procedures, and coordinating technical service requests. My background in Marine Corps communications and public safety has taught me to listen carefully, explain clearly, and follow a problem through to resolution.

At Jacksonville Fire and Emergency Services, I supported the transition from Windows mobile terminals to approximately 24 iPads across 12 apparatus and four stations, helping troubleshoot issues and guide personnel using the new devices. As Protective Equipment Manager, I also drove a Firehouse-to-ESO migration over several months. I reviewed Excel source documents and created more than 2,700 individual equipment records in ESO, moving the department's inventory into its new application.

During a temporary assignment to the Jacksonville Police Department Telecommunications Center, I authored or revised six SOPs, including instructions for GlobalProtect VPN access, radio channels, and on-call notifications. Turning operational requirements into steps people could follow strengthened my approach to user documentation. I would bring the same care to knowledge articles, onboarding guides, and clear support updates.

In the Marine Corps, I assisted a help desk serving approximately 200 users, provided Windows and network support, and trained more than 210 personnel through demonstrations and practical exercises. I also processed more than 150 maintenance and service requests through GCSS-MC. Clarifying user needs, maintaining accurate records, and coordinating the right technical resources were central to that work. Those habits support careful troubleshooting, useful escalation notes, and dependable follow-through.

I hold an associate degree in Emergency Management and am pursuing a BS in Information Technology with a concentration in Data Networking and Security. I would welcome an interview to discuss how my technical support, instruction, and operational experience could contribute to your team. Thank you for your consideration.

Sincerely,

Derick Jermaine Gary
